

Picture Book Analysis Framework v1.0

(Teacher Thinking Before Lesson Planning)

1. Basic Book Information

Purpose: Understand the teaching context.

Book title:

Author:

Level:

Estimated reading difficulty:

Recommended age:

Number of pages:

Main characters:

2. Story Analysis

2.1 Story Overview

Identify:

- What happens in the story?
- Who is involved?
- What is the main event?

Output:

Short story summary:
(3–5 sentences)

2.2 Story Structure

Identify:

Beginning

- Who/what is introduced?
- What is happening first?

Middle

- What changes?
- What problem happens?

Ending

- How is the problem solved?
- What does the character learn?

Output:

Beginning:

Middle:

Ending:

2.3 Characters

For each character:

Identify:

Character:

Role:

Actions:

Feelings:

Important language:

Example:

Puppy

Role:

Main character

Actions:

chews, breaks, eats

Feelings:

happy, playful

Language:

"He chews..."

3. Illustration Analysis

(Very important for picture books)

The AI must NOT only read text.

3.1 Important Visual Details

Identify:

- objects shown

- background details
- character actions
- facial expressions
- visual clues

Output:

Page:

Visual detail:

Teaching opportunity:

Example:

Page 5:

Visual detail:

Feathers are everywhere.

Teaching opportunity:

Vocabulary:

mess, broken

Question:

"What is everywhere?"

3.2 Picture Prediction Opportunities

Find moments where students can predict.

Example:

Before reading:

"What do you think will happen next?"

Identify:

- interesting pictures
- unusual objects
- character reactions

4. Language Feature Analysis

This is the part Gemini missed.

Before making a lesson, identify the book's language design.

4.1 Repeated Language Patterns

Look for:

- repeated sentences
- repeated chunks
- useful sentence frames

Example:

Pattern:

He chews _____.

Examples:

He chews my shoe.

He chews my boot.

Teaching use:

Speaking frame:

He _____s _____.

4.2 Grammar Focus

Identify naturally occurring grammar.

Possible areas:

- present simple
- present continuous
- past tense
- adjectives
- prepositions
- questions

Output:

Grammar feature:

Story examples:

Teaching priority:

Important rule:

Do NOT force grammar.

Only teach grammar that supports speaking.

4.3 Phonics / Sound Features

Identify:

Rhyming words

Example:

chew

shoe
boot
fruit
suit

Sound patterns

Examples:

-oo sound
ch sound
sh sound
-ing ending

Word families

Example:

chair
bear
hair

Teaching opportunities:

Possible phonics activity:

Rhyme matching
Sound sorting
Word building

4.4 Vocabulary Analysis

Select vocabulary based on usefulness.

Divide into:

Core vocabulary

Students should actively use.

Example:

chew
shoe
break
toy

Extension vocabulary

For stronger students.

Example:

brand-new
fluffy
belongings
Avoid:

- every noun in the book
- difficult words with no speaking value

5. Teaching Target Analysis

After analyzing the book, decide:

Main Teaching Target

Only choose 1–2 main targets.

Example:

For Things He Chews:

Primary:
Rhyming words (-oo sound)

Secondary:
Sentence pattern:
"He chews ____."

Student Output Goal

What should students be able to say after 25 minutes?

Example:

Students can:
1. Say three rhyming words.
2. Describe objects using:
"He chews a ____."

6. Question Design Guidance

Before generating questions, identify:

Observation Questions

Purpose:
Make students look.

Examples:

"What can you see?"

"Who is hiding?"

"What is the dog holding?"

Comprehension Questions

Purpose:

Check story understanding.

Examples:

"What happened?"

"Who did it?"

"Where are they?"

Thinking Questions

Purpose:

Encourage personal speaking.

Examples:

"How do you feel?"

"What would you do?"

"Why?"

Rule:

For young learners:

- keep thinking questions simple
- provide sentence frames

7. Game Recommendation Analysis

The AI should choose games based on targets.

Not random games.

If target = phonics/rhyme

Use:

- rhyme matching
- sound sorting
- odd one out
- word family game

If target = vocabulary

Use:

- guessing
- memory
- matching
- categorizing

If target = sentence pattern

Use:

- sentence builder
- picture description
- guessing game

If target = comprehension

Use:

- story sequencing
- problem/solution
- character role play

8. Lesson Difficulty Check

Before generating:

Evaluate:

Level:

Too easy?

Too difficult?

Vocabulary load:

(number of new words)

Speaking load:

(amount student talks)

Teacher workload:
(can this be taught in 25 minutes?)

9. Final Teacher Decision

The AI must finish with:

This book is mainly useful for teaching:

- 1.
- 2.

The lesson should emphasize:

- 1.
- 2.

Avoid teaching:

- 1.
- 2.

Example for "Things He Chews"

The analysis should conclude:

Main teaching value:

1. Rhyming words and phonics (-oo sound)
2. Repeated sentence pattern:
"He chews..."

Secondary:

Vocabulary about objects and actions

Avoid:

Heavy grammar explanation

Long comprehension discussion

Teaching every object word
